**Priorität:** Hoch

### Dear ECST-2 Investigators

It's our pleasure to send you **the February Newsletter from the ECST-2 Study**.

Please remember:

- to ensure complete follow-up of all randomized patients and remember to perform the brain MRI at 2 years and 5 years after randomisation, because this is essential for assessing the primary outcome measure for the pilot study and the plaque imaging sub-study.
- to answer queries in SealedEnvelope as soon as possible
- we will soon start checking the completeness of baseline data
- to send all imaging on CDs asap to the Trial Office in London, for the correct address please see newsletter from January 2020
- from March 2020, we will be checking if all the required imaging has been received in the Trial Office in London and will let you know what is missing
- Nevertheless, please create your own CD tracker in order to compare this with our tracker, this will help a lot

We are pleased to assist you with any question you might have and finally:  
thank you very much for completing the data and the time and energy you have already invested in this study!

Best regards

Prof Leo Bonati, MD  
Co-Chief Investigator Basel
